EXECUTIVE SUMMARY

This Phase I Environmental Site Assessment (ESA) was performed in accordance with Terracon Proposal No. P35237207 dated July 27, 2023 and was conducted consistent with the procedures included in ASTM E1527-21, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*. The purpose of this ESA was to assist the client in developing information to identify RECs in connection with the site as reflected by the scope of this report. The ESA was conducted under the supervision or responsible charge of Merrick Rotenberry, Environmental Professional. Joshua Ray performed the site reconnaissance on June 25, 2023.

Findings and Opinions

A summary of findings is provided below. It should be recognized that details were not included or fully developed in this section, and the report must be read in its entirety for a comprehensive understanding of the items contained herein.

Site Description and Use

The site is an approximate 32-acre tract of undeveloped partially wooded land located at 3026 Highway 67 South in Arkadelphia, Arkansas. At the time of this assessment, there were no structures or operations on the property.

Historical Information

The site has consisted of undeveloped wooded land with a small structure as early as 1957, until the late 1960s when an apparent former truck stop was located at the northwest portion of the site. Red Ball Oxygen (an industrial gas and welding supplies distributor) purchased the site in the early 1980s and operated onsite until January 2012, when operations ceased. The 2018 aerial photograph indicates structures associated with the former Red Ball had been demolished and removed.

In April 2012, Terracon performed a Phase I ESA at the former Red Ball Oxygen facility. As a result of the 2012 Phase I, Terracon subsequently performed a Limited Site Investigation (LSI) at the facility in March 2013. The LSI results indicated that residual petroleum hydrocarbon impact to soil and groundwater was identified near the suspect former pump island. Based on the 2013 LSI, the documented impact to soil and groundwater is considered a Recognized Environmental Conditions (REC). See Section 3.7.

The surrounding properties are also primarily undeveloped land, until the early 1980s, when a food manufacturing plant (Hostess Brands) was constructed to the southeast. The 1994 aerial photograph indicates a gasoline station was present adjacent to the north across Reynolds Road. Land use to the east and west has remained undeveloped.

The gas station facility does not appear to represent a REC to the site at this time based upon distance from the site, current regulatory status and topographic position relative to the site (see Section 3.8).

Recognized Environmental Conditions (RECs) were not identified in connection with the documented historical uses of the site or surrounding properties.

Records Review

The database review provided by EDR identified the site as an asbestos facility associated with the demolition of the former Red Ball Oxygen structures. The EDR also listed one leaking underground storage tank (LUST) facility within the specified search radius.

Based upon distance from the site, current regulatory status and topographic position relative to the site, the facility listings are not considered a REC (see Section 4.1).

Site Reconnaissance

Site reconnaissance revealed a tract of undeveloped partially wooded land. One pole mounted transformer was located at the northern portion of the property. RECs were not observed during Terracon's site visit.

Prior Reports

Previous environmental reports for the site were provided by client to Terracon for review as follows:

- Phase I Environmental Site Assessment, Red Ball Oxygen, Arkadelphia, AR: prepared by Terracon for Arkadelphia Regional Economic Development Alliance, dated April 27, 2012.
- Limited Site Investigation, Red Ball Oxygen, Arkadelphia, AR: prepared by Terracon for Arkadelphia Regional Economic Development Alliance, dated March 22, 2013.

See Section 3.7 for a summary of the previous environmental reports.

Adjoining Properties

During the site reconnaissance, Terracon observed the following adjoining properties:

- North: Reynolds Road, followed by a closed service station
- East: Undeveloped land
- South: Undeveloped land
- West: Highway 67, followed by undeveloped land

Significant Data Gaps

Significant data gaps were not encountered during the course of this ESA.

Additional Services

Per the agreed scope of services specified in the proposal, other additional services (asbestos inspection, lead-based paint sampling, wetlands evaluation, lead in drinking water testing, radon testing, vapor encroachment screening, etc.) were not conducted.

Conclusions

We have performed a Phase I ESA consistent with the procedures included in ASTM Practice E1527-21 for Undeveloped Land located at 3026 Highway 67 South in Arkadelphia, Clark County, Arkansas, the site. Terracon identified the following RECs in connection with the site:

- Residual petroleum hydrocarbon impact to soil and groundwater identified near the on-site former pump island at the northwest portion of site during the 2013 LSI.

Recommendations

Based on the scope of services, limitations, and conclusions of this assessment, Terracon does not recommend further investigation at this time.

Shallow groundwater should not be used as a source of potable drinking water at the site. If shallow soil or groundwater is encountered during construction activities near the former Red Ball Oxygen facility, it is recommended that exposure to media be minimized, and the material properly disposed in accordance with applicable State and federal regulations.

Although not observed during the site reconnaissance, based on the 2012 interview with Red Ball Oxygen, a septic was located east of the former office building. In the event that a septic tank is discovered, it is recommended that tank be closed in accordance with Arkansas Department of Health regulations.

1.0 INTRODUCTION

1.1 Site Description

Site Name	Undeveloped Land
Site Location/Address	3026 Highway 67 South in Arkadelphia, Clark County, Arkansas
Land Area	Approximately 32 acres
Site Improvements	Undeveloped partially wooded land
Anticipated Future Site Use	Industrial Redevelopment
Reason for the ESA	Owner's due diligence

The location of the site is depicted on Exhibit 1 of Appendix A, which was reproduced from a portion of the USGS 7.5-minute series topographic map. The site and adjoining properties are depicted on the Site Diagram, which is included as Exhibit 2 of Appendix A. Acronyms and terms used in this report are described in Appendix F.

1.2 Scope of Services

This Phase I ESA was performed in accordance with Terracon Proposal No. P35237207 dated July 27, 2023 and was conducted consistent with the procedures included in ASTM E1527-21, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*. The purpose of this ESA was to assist the client in developing information to identify RECs in connection with the site as reflected by the scope of this report. Recognized environmental conditions are defined by ASTM E1527-21 as "(1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment." A de minimis condition is not a recognized environmental condition.

This purpose was undertaken through user-provided information, a regulatory database review, historical and physical records review, interviews (including local government inquiries, as applicable), and a visual noninvasive reconnaissance of the site and adjoining properties. Limitations, ASTM deviations, and significant data gaps (if identified) are noted in the applicable sections of the report.

1.3 Standard of Care

This ESA was performed in accordance with generally accepted practices of this profession, undertaken in similar studies at the same time and in the same geographical area. We have endeavored to meet this standard of care, but may be limited by conditions encountered during performance, a client-driven scope of work, or inability to review information not received by the report date. Where appropriate, these limitations are discussed in the text of the report, and an evaluation of their significance with respect to our findings has been conducted.

Phase I ESAs, such as the one performed at this site, are of limited scope, are noninvasive, and cannot eliminate the potential that hazardous, toxic, or petroleum substances are present or have been released at the site beyond what is identified by the limited scope of this ESA. In conducting the limited scope of services described herein, certain sources of information and public records were not reviewed. It should be recognized that environmental concerns may be documented in public records that were not reviewed. No ESA can wholly eliminate uncertainty regarding the potential for RECs in connection with a property. Performance of this practice is intended to reduce, but not eliminate, uncertainty regarding the potential for RECs. No warranties, express or implied, are intended or made. The limitations herein must be considered when the user of this report formulates opinions as to risks associated with the site or otherwise uses the report for any other purpose. These risks may be further evaluated – but not eliminated – through additional research or assessment. We will, upon request, advise you of additional research or assessment options that may be available and associated costs.

1.4 Additional Scope Limitations, ASTM Deviations, and Data Gaps

Based upon the agreed-on scope of services, this ESA did not include subsurface or other invasive assessments, vapor intrusion assessments or indoor air quality assessments (i.e., evaluation of the presence of vapors within a building structure), business environmental risk evaluations, or other services not particularly identified and discussed herein. Credentials of the company (Statement of Qualifications) have not been included in this report but are available upon request. Pertinent documents are referred to in the text of this report, and a separate reference section has not been included. Reasonable attempts were made to obtain information within the scope and time constraints set forth by the client; however, in some instances, information requested is not, or was not, received by the issuance date of the report. Information obtained for this ESA was received from several sources that we believe to be reliable; nonetheless, the authenticity or reliability of these sources cannot and is not warranted hereunder. This ESA was further limited by the following:

- Historical information was not provided back to 1940. Uses of the site were described only as far back as 1957, and at the direction of the client, land title records were not reviewed. The 1957 aerial indicates the site was primarily undeveloped land, with a small structure on the north. Based on the amount of available data for the site, the lack of historical information is not considered a significant data gap.

An evaluation of the significance of limitations and missing information with respect to our findings has been conducted, and where appropriate, significant data gaps are identified and discussed in the text of the report. However, it should be recognized that an evaluation of significant data gaps is based on the information available at the time of report issuance, and an evaluation of information received after the report issuance date may result in an alteration of our conclusions, recommendations, or opinions. We have no obligation to provide information obtained or discovered by us after the issuance date of the report, or to perform any additional services, regardless of whether the information would affect any conclusions, recommendations, or opinions in the report. This disclaimer specifically applies to any information that has not been provided by the client.

This report represents our service to you as of the report date and constitutes our final document; its text may not be altered after final issuance. Findings in this report are based upon the site's current utilization, information derived from the most recent reconnaissance and from other activities described herein; such information is subject to change. Certain indicators of the presence of hazardous substances, petroleum products or PFAS compounds may have been latent, inaccessible, unobservable, or not present during the most recent reconnaissance and may subsequently become observable (such as after site renovation or development). Further, these services are not to be construed as legal interpretation or advice.

1.5 Reliance

This ESA report is prepared for the exclusive use and reliance of Economic Development Corporation of Clark County (EDCCC) and the Arkadelphia Regional Economic Development Alliance. Use or reliance by any other party is prohibited without the written authorization of client and Terracon Consultants, Inc. (Terracon).

Reliance on the ESA by the client and all authorized parties will be subject to the terms, conditions and limitations stated in the proposal, ESA report, and Terracon's Agreement. The limitation of liability defined in the Agreement is the aggregate limit of Terracon's liability to the client and all relying parties.

Continued viability of this report is subject to ASTM E1527-21 Section 4.6. If the ESA will be used by a different user (third party) than the user for whom the ESA was

originally prepared, the third party must also satisfy the user’s responsibilities in Section 6 of ASTM E1527-21.

1.6 Client Provided Information

Prior to the site visit, Shelley Short, client’s representative, was asked to provide the following user questionnaire information as described in ASTM E1527-21 Section 6.

3.0 HISTORICAL USE INFORMATION

Terracon reviewed the following historical sources to develop a history of the previous uses of the site and surrounding area, in order to help identify RECs associated with past uses. Copies of selected historical documents are included in Appendix C.

3.1 Historical Topographic Maps, Aerial Photographs, and Sanborn Maps

Readily available historical USGS topographic maps and selected historical aerial photographs (at approximately 10-to-15-year intervals) were reviewed to evaluate land development and obtain information concerning the history of development on and near the site. Reviewed historical topographic maps and aerial photographs are summarized below.

Historical fire insurance maps produced by the Sanborn Map Company were requested from EDR to evaluate past uses and relevant characteristics of the site and surrounding

properties. Based upon inquiries to the above-listed Sanborn provider, Sanborn maps were not available for the site.

3.3 Site Ownership

Based on a review of information obtained from the City of Arkadelphia online tax parcel records, the current site owner is Economic Development Corporation of Clark County.

3.4 Title Search

At the direction of the client, a title search was not included as part of the scope of services. Unless notified otherwise, we assume that the client is evaluating this information outside the scope of this report.

3.5 Environmental Liens and Activity and Use Limitations

The EDR regulatory database report included a review of both Federal and State Engineering Control (EC) and Institutional Control (IC) databases. Based on a review of the database report, the site was not listed on the EC or IC databases. Please note that in addition to these federal and state listings, AULs can be recorded at the county and municipal level that may not be listed in the regulatory database report. Environmental lien and activity and use limitation records recorded against the site were not provided by the client. At the direction of the client, performance of a review of these records was not included as part of the scope of services and unless notified otherwise, we assume that the client is evaluating this information outside the scope of this report.

3.6 Interviews Regarding Current and Historical Site Uses

The following individual was interviewed regarding the current and historical use of the site.

Interview

Interviewer	Name / Phone #	Title	Date
Julie Whittle	Mr. Larry Kennedy	Vice President of Red Ball Oxygen	April 19, 2012
Merrick Rotenberry	Ms. Shelley Short/870-246-1460	Arkadelphia Economic Development Alliance	July 27, 2023

Terracon interviewed Mr. Larry Kennedy, Vice President of Red Ball Oxygen, regarding the site history. Mr. Kennedy stated that Red Ball Oxygen purchased the site in the early

1980s and operated onsite until January 2012. Mr. Kennedy stated that the site operated in conjunction with several tenants throughout the years, primarily metal fabricators, and was last occupied by Designed Automation. Site operations consisted of the distribution of welding supplies and specialty gases, metal fabrication and sand blasting. A septic tank was reported present to the east of the office/shop building located in the central portion of the site. Mr. Kennedy stated that the septic system is used for waste purposes and only restrooms reportedly drain into the system. According to Mr. Kennedy, the site was historically utilized as a truck stop. However, Mr. Kennedy was unaware of former onsite USTs. Mr. Robertson was not aware of any environmental issues regarding the site and was not aware of any pending, threatened or past environmental litigation, proceedings or notices of possible violations of environmental laws or liability in connection with the site.

Terracon interviewed Ms. Shelley Short, client representative, regarding the site history. Ms. Short indicated she was aware of the former Red Ball Oxygen facility and Terracon's 2013 LSI, but was not aware of the site's history other than this. Ms. Short stated that she was unaware of any of the following in connection with the site:

- Pending environmental litigation;
- Threatened environmental litigation;
- Past environmental litigation;
- Possible violations of environmental laws;
- Possible environmental liability;

3.7 Prior Report Review

Previous environmental reports for the site were provided by client to Terracon for review as follows:

Phase I Environmental Site Assessment, Red Ball Oxygen, Arkadelphia, AR:
prepared by Terracon for Arkadelphia Regional Economic Development Alliance,
dated April 27, 2012.

In April 2012, Terracon conducted a Phase I ESA on the northwest portion of the site (3.82 acres) containing the former Red Ball Oxygen facility. Based on the results of the Phase I ESA, Terracon identified the following RECs:

- Presence of an apparent former fuel pump island and absence of information regarding closure of the suspect UST system associated with the former onsite truck stop.

- Potential for impact of metals associated with onsite sand blasting and metal fabrication operations;
- Areas of stained soil; and
- Presence of dumped waste sand on southeast portion of the site associated with sand blasting operations.

Limited Site Investigation, Red Ball Oxygen, Arkadelphia, AR: prepared by Terracon for Arkadelphia Regional Economic Development Alliance, dated March 22, 2013.

As a result of the 2012 Phase I ESA, Terracon conducted an LSI at the former Red Ball Oxygen facility. The LSI consisted of advancing four soil borings and converting the soil borings to monitoring wells for soil/groundwater analyses. The soil and groundwater samples were analyzed for volatile organic compounds (VOCs), total petroleum hydrocarbons (TPH) and RCRA Metals.

In addition, three surficial (0-4 inches) soil samples were collected at areas of identified soil staining and analyzed for VOCs, TPH and RCRA Metals, and one composite sample was collected of the spent sand blast material for TCLP metals characterization.

Soil

Based on the lab results, various VOC constituents were detected in the soil samples; however, the detected VOC constituents did not exceed their respective screening levels (SLs). Detected metal concentrations did not exceed their respective SLs.

TPH-GRO was detected at concentrations ranging from non-detect (ND) to 12 milligrams per kilogram (mg/kg), which are below the SLs. TPH-DRO was detected at concentrations ranging from ND to 7,800 mg/kg (0-4 inches), which exceeded the ADEQ recommended screening level of 2,300 mg/kg.

Based on the TCLP analytical results, the spent sand blast material was not considered a characteristic hazardous material for metals.

Groundwater

Two VOC constituents were detected in the groundwater samples; however, the detected VOC constituents did not exceed their respective SLs. Detected metal concentrations did not exceed their respective SLs.

TPH-GRO was not detected in the groundwater samples. TPH-DRO was detected at concentrations ranging from 540 micrograms per liter (ug/l) to 2,400 ug/lg, which exceeded the ADEQ recommended screening level of 400 ug/l.

The LSI stated that if shallow soil or groundwater is encountered during construction activities, it is recommended that exposure to media be minimized and the material properly disposed in accordance with applicable State and federal regulations.

3.8 Records Review

Regulatory database information was provided by EDR, a contract information services company. The purpose of the records review was to identify RECs in connection with the site. Information in this section is subject to the accuracy of the data provided by the information services company and the date at which the information is updated, and the scope herein did not include confirmation of facilities listed as "unmappable" by regulatory databases.

In some of the following subsections, the words up-gradient, cross-gradient, and down-gradient refer to the topographic gradient in relation to the site. As stated previously, the groundwater flow direction and the depth to shallow groundwater, if present, would likely vary depending upon seasonal variations in rainfall and the depth to the soil/bedrock interface. Without the benefit of on-site groundwater monitoring wells surveyed to a datum, groundwater depth and flow direction beneath the site cannot be directly ascertained.

3.9 Federal and State/Tribal Databases

Listed below are the facility listings identified on federal and state/tribal databases within the ASTM-required search distances from the approximate site boundaries. Database definition, descriptions, and the database search report are included in Appendix D.

In addition to the above ASTM-required listings, Terracon reviewed other federal, state, local, and proprietary databases provided by the database firm. A list of the additional reviewed databases is included in the regulatory database report in Appendix D.

The following table summarizes the site-specific information provided by the database and/or gathered by this office for identified facilities. Facilities are listed in order of proximity to the site. Additional discussion for selected facilities within 1,000 feet of the site follows the summary table.

Listed Facilities

Facility Name And Location	Estimated Distance/ Direction/ Gradient	Database Listings	Is a REC, CREC, or HREC to the Site
Red Ball Oxygen 3026 Hwy 67	Site	Asbestos	No
Gum Springs Citgo 140 Reynolds Road	Adjacent / north / down-gradient	LUST	No, see discussion below

Red Ball Oxygen (Asbestos)

The site was listed as an asbestos facility associated with demolition of the former Red Ball Oxygen structures. The asbestos listing is not considered a REC.

Gum Springs Citgo (LUST)

The Gum Springs Citgo, located adjacent to the north across Reynolds Road, was listed as a LUST. The facility formerly operated with one 10,000-gallon gasoline, two 4,000-gallon gasoline, and one 6,000-gallon diesel USTs, installed in 1993 and listed as temporarily out of service.

It should be noted that the UST tank pit/pump islands are located approximately 100 feet north of the site, and the facility is located downgradient (Reynolds Road is a topographic high).

The facility was listed as a LUST in May 2000 when free product was observed under a fuel pump. The product was removed and ADEQ issued a no further action letter in June 2001.

The facility was also listed as a LUST in August 2000 when free product was observed during a line repair. A Limited Site Assessment was conducted and based on the assessment results, ADEQ issued a no further action letter in July 2001.

The facility is currently closed. Based upon distance from the site, current regulatory status and topographic position, the LUST facility is not considered a REC to the site

Septic tanks and/or leach fields

Although not observed during the site reconnaissance, based on the 2012 interview with Red Ball Oxygen, a septic was located east of the former office building. In the event

that a septic tank is discovered, it is recommended that tank be closed in accordance with Arkansas Department of Health regulations.

Electrical Transformers/ PCBs

Transformers and/or capacitors

One pole mounted transformer was observed on the northern portion of the site. however, no information with regard to PCB content of the transformer fluids was observed. Transformers contain mineral oil which may contain minor amounts of PCB and could be considered "PCB contaminated" (PCB content of 50-500 ppm).

Entergy maintains responsibility for the transformer, and if the transformer was "PCB contaminated," the utility company is not required to replace the transformer fluids until a release is identified. However, no evidence of current or prior releases was observed in the vicinity of the electrical equipment during the site reconnaissance. Based on this information, the on-site electrical equipment does not appear to constitute a REC at this time.

5.0 ADJOINING PROPERTY RECONNAISSANCE

Visual observations of adjoining properties (from site boundaries) are summarized below.

Adjoining Properties

Direction	Description
North	Reynolds Road, followed by a closed service station
East	Undeveloped land
South	Undeveloped land
West	Hwy 67, followed by undeveloped land

RECs were not observed with the adjoining properties.

6.0 ADDITIONAL SERVICES

Per the agreed scope of services specified in the proposal, other additional services (asbestos inspection, lead-based paint sampling, wetlands evaluation, lead in drinking water testing, radon testing, vapor encroachment screening, etc.) were not conducted.

7.0 DECLARATION

I, Merrick Rotenberry, declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in Section 312.10 of 40 CFR 312; and I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the site. These inquiries must also be conducted by EPA Brownfield Assessment and Characterization grantees. The user should provide the following information to the *environmental professional*. Failure to conduct these inquiries could result in a determination that "*all appropriate inquiries*" is not complete.

- 1) Did a search of land title records (or judicial records where appropriate) identify any environmental liens filed or recorded against the site under federal, tribal, state, or local law (40 CFR 312.25)?
 No Yes (If yes, explain below and send Terracon a copy of the title records or judicial records reviewed.)
- 2) Did a search of land title records (or judicial records where appropriate) identify any activity and use limitations (AULs), such as engineering controls, land use restrictions, or institutional controls that are in place at the site and/or have been filed or recorded against the site under federal, tribal, state, or local law (40 CFR 312.26)?
 No Yes (If yes, explain below and send Terracon a copy of the title records or judicial records reviewed.)
- 3) Do you have any specialized knowledge or experience related to the site or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the site or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business (40 CFR 312-28)?
 No Yes (If yes, explain below)
- 4) Does the purchase price being paid for this site reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the site?
 No Yes Not applicable (If yes or Not applicable, explain below)
- 5) Are you aware of commonly known or reasonably ascertainable information about the site that would help the environmental professional to identify conditions indicative of releases or threatened releases (40 CFR 312.30)? For example, (a.) Do you know the past uses of the site? (b.) Do you know of specific chemicals that are present or once were present at the site? (c.) Do you know of spills or other chemical releases that have taken place at the site? (d.) Do you know of any environmental cleanups that have taken place at the site?
 No Yes (If yes, explain below)
- 6) Based on your knowledge and experience related to the site, are there any obvious indicators that point to the presence or likely presence of releases at the site (40 CFR 312.31)?
 No Yes (If yes, explain below)

Comments or explanations: 3. The EDCCC owns nearby properties and markets them for industrial development. 4. FMV was paid when the property was purchased years ago and is currently being offered at FMV based on the sale of nearby properties 5 & 6. A Phase II report was generated by Terracon in 2013 containing findings and recommendations concerning residual petroleum hydrocarbon impact to soil and groundwater, underlying the area of the suspect former pump islands, has occurred. For full details, please refer to Terracon Project # 35137028.

USGS TOPOGRAPHIC MAP

Target Property Map:	15633358 ARKADELPHIA, AR
Version Date:	2020

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General ESE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

APPENDIX F
DESCRIPTION OF TERMS AND ACRONYMS

Description of Selected General Terms and Acronyms

Term/Acronym	Description
ACM	<p>Asbestos Containing Material. Asbestos is a naturally occurring mineral, three varieties of which (chrysotile, amosite, crocidolite) have been commonly used as fireproofing or binding agents in construction materials. Exposure to asbestos, as well as ACM, has been documented to cause lung diseases including asbestosis (scarring of the lung), lung cancer and mesothelioma (a cancer of the lung lining).</p> <p>Regulatory agencies have generally defined ACM as a material containing greater than one (1) percent asbestos, however some states (e.g., California) define ACM as materials having 0.1% asbestos. In order to define a homogenous material as non-ACM, a minimum number of samples must be collected from the material dependent upon its type and quantity. Homogenous materials defined as non-ACM must either have 1) no asbestos identified in all of its samples or 2) an identified asbestos concentration below the appropriate regulatory threshold. Asbestos concentrations are generally determined using polarized light microscopy or transmission electron microscopy. Point counting is an analytical method to statistically quantify the percentage of asbestos in a sample. The asbestos component of ACM may either be friable or non-friable. Friable materials, when dry, can be crumbled, pulverized, or reduced to powder by hand pressure and have a higher potential for a fiber release than non-friable ACM. Non-friable ACM are materials that are firmly bound in a matrix by plastic, cement, etc. and, if handled carefully, will not become friable.</p> <p>Federal and state regulations require that either all suspect building materials be presumed ACM or that an asbestos survey be performed prior to renovation, dismantling, demolition, or other activities that may disturb potential ACM. Notifications are required prior to demolition and/or renovation activities that may impact the condition of ACM in a building. ACM removal may be required if the ACM is likely to be disturbed or damaged during the demolition or renovation. Abatement of friable or potentially friable ACM must be performed by a licensed abatement contractor in accordance with state rules and NESHAP. Additionally, OSHA regulations for work classification, worker training and worker protection will apply.</p>
AHERA	Asbestos Hazard Emergency Response Act
AST	Aboveground Storage Tanks. ASTs are generally described as storage tanks less than 10% of which are below ground (i.e., buried). Tanks located in a basement, but not buried, are also considered ASTs. Whether, and the extent to which, an AST is regulated, is determined on a case-by-case basis and depends upon tank size, its contents and the jurisdiction of its location.
BGS	Below Ground Surface

Description of Selected General Terms and Acronyms

Term/Acronym	Description
FRP	Fiberglass Reinforced Plastic
Hazardous Substance	As defined under CERCLA, this is (A) any substance designated pursuant to section 1321(b)(2)(A) of Title 33, (B) any element, compound, mixture, solution, or substance designated pursuant to section 9602 of this title; (C) any hazardous waste having characteristics identified under or listed pursuant to section 3001 of the Solid Waste Disposal Act (with some exclusions); (D) any toxic pollutant listed under section 1317(a) of Title 33; (E) any hazardous air pollutant listed under section 112 of the Clean Air Act; and (F) any imminently hazardous chemical substance or mixture with respect to which the EPA Administrator has taken action under section 2606 of Title 15. This term does not include petroleum, including crude oil or any fraction thereof which is not otherwise listed as a hazardous substance under subparagraphs (A) through (F) above, and the term include natural gas, or synthetic gas usable for fuel (or mixtures of natural gas and such synthetic gas).
Hazardous Waste	This is defined as having characteristics identified or listed under section 3001 of the Solid Waste Disposal Act (with some exceptions). RCRA, as amended by the Solid Waste Disposal Act of 1980, defines this term as a "solid waste, or combination of solid wastes, which because of its quantity, concentration, or physical, chemical, or infectious characteristics may (A) cause, or significantly contribute to an increase in mortality or an increase in serious irreversible, or incapacitating reversible illness; or (B) pose a substantial present or potential hazard to human health or the environment when improperly treated, stored, transported, or disposed of, or otherwise managed."
HREC	Historical Recognized Environmental Condition is defined in ASTM E1527-21 as "a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted residential use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). Before calling the past release a historical recognized environmental condition, the environmental professional must determine whether the past release is a recognized environmental condition at the time of the Phase I Environmental Site Assessment is conducted (for example, if there has been a change in the regulatory criteria). If the EP considers the past release to be a recognized environmental condition at the time the Phase I ESA is conducted, the condition shall be included in the conclusions section of the report as a recognized environmental condition."

Description of Selected General Terms and Acronyms

Term/Acronym	Description
PACM	Presumed Asbestos-Containing Material. A material that is suspected of containing or presumed to contain asbestos but which has not been analyzed to confirm the presence or absence of asbestos.
PCB	Polychlorinated Biphenyl. A halogenated organic compound commonly in the form of a viscous liquid or resin, a flowing yellow oil, or a waxy solid. This compound was historically used as dielectric fluid in electrical equipment (such as electrical transformers and capacitors, electrical ballasts, hydraulic and heat transfer fluids), and for numerous heat and fire sensitive applications. PCB was preferred due to its durability, stability (even at high temperatures), good chemical resistance, low volatility, flammability, and conductivity. PCBs, however, do not break down in the environment and are classified by the EPA as a suspected carcinogen. 1978 regulations, under the Toxic Substances Control Act, prohibit manufacturing of PCB-containing equipment; however, some of this equipment may still be in use today.
pCi/L	picoCuries per Liter of Air. Unit of measurement for Radon and similar radioactive materials.
PLM	Polarized Light Microscopy (see ACM section of the report, if included in the scope of services)
PST	Petroleum Storage Tank. An AST or UST that contains a petroleum product.
Radon	A radioactive gas resulting from radioactive decay of naturally-occurring radioactive materials in rocks and soils containing uranium, granite, shale, phosphate, and pitchblende. Radon concentrations are measured in picoCuries per Liter of Air. Exposure to elevated levels of radon creates a risk of lung cancer; this risk generally increases as the level of radon and the duration of exposure increases. Outdoors, radon is diluted to such low concentrations that it usually does not present a health concern. However, radon can accumulate in building basements or similar enclosed spaces to levels that can pose a risk to human health. Indoor radon concentrations depend primarily upon the building's construction, design and the concentration of radon in the underlying soil and ground water. The EPA recommended annual average indoor "action level" concentration for residential structures is 4.0 pCi/l.
RCRA	Resource Conservation and Recovery Act. Federal act regulating solid and hazardous wastes from point of generation to time of disposal ("cradle to grave"). 42 U.S.C. 6901 et seq.
RCRA Generators	The RCRA Generators database, maintained by the EPA, lists facilities that generate hazardous waste as part of their normal business practices. Generators are listed as either large (LQG), small (SQG), or conditionally exempt (CESQG). LQG produce at least 1000 kg/month of non-acutely hazardous waste or 1 kg/month of acutely hazardous waste. SQG produce 100-1000 kg/month of non-acutely hazardous waste. CESQG are those that generate less than 100 kg/month of non-acutely hazardous waste.

Description of Selected General Terms and Acronyms

Term/Acronym	Description
RCRA CORRACTS/ TSDs	The USEPA maintains a database of RCRA facilities associated with treatment, storage, and disposal (TSD) of hazardous materials which are undergoing "corrective action". A "corrective action" order is issued when there is a release of hazardous waste or constituents into the environment from a RCRA facility.
RCRA Non-CORRACTS/ TSDs	The RCRA Non-CORRACTS/TSD Database is a compilation by the USEPA of facilities which report storage, transportation, treatment, or disposal of hazardous waste. Unlike the RCRA CORRACTS/TSD database, the RCRA Non-CORRACTS/TSD database does not include RCRA facilities where corrective action is required.
RCRA Violators List	RAATS. RCRA Administrative Actions Taken. RAATS information is now contained in the RCRIS database and includes records of administrative enforcement actions against facilities for noncompliance.
RCRIS	Resource Conservation and Recovery Information System, as defined in the Records Review section of this report.
REC	Recognized Environmental Conditions are defined by ASTM E1527-21 as 1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment. A de minimis condition is not a recognized environmental condition.
SCL	State "CERCLIS" List (see SPL /State Priority List, below).
SPCC	Spill Prevention, Control and Countermeasures. SPCC plans are required under federal law (Clean Water Act and Oil Pollution Act) for any facility storing petroleum in tanks and/or containers of 55-gallons or more that when taken in aggregate exceed 1,320 gallons. SPCC plans are also required for facilities with underground petroleum storage tanks with capacities of over 42,000 gallons. Many states have similar spill prevention programs, which may have additional requirements.

Wetlands	<p>Areas that are typically saturated with surface or ground water that creates an environment supportive of wetland vegetation (i.e., swamps, marshes, bogs). The <u>Corps of Engineers Wetlands Delineation Manual</u> (Technical Report Y-87-1) defines wetlands as areas inundated or saturated by surface or ground water at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions. For an area to be considered a jurisdictional wetland, it must meet the following criteria: more than 50 percent of the dominant plant species must be categorized as Obligate, Facultative Wetland, or Facultative on lists of plant species that occur in wetlands; the soil must be hydric; and, wetland hydrology must be present.</p> <p>The federal Clean Water Act which regulates “waters of the US,” also regulates wetlands, a program jointly administered by the USACE and the EPA. Waters of the U.S. are defined as: (1) waters used in interstate or foreign commerce, including all waters subject to the ebb and flow of tides; (2) all interstate waters including interstate wetlands; (3) all other waters such as intrastate lakes, rivers, streams (including intermittent streams), mudflats, sandflats, wetlands, sloughs, prairie potholes, wet meadows, playa lakes, or natural ponds, etc., which the use, degradation, or destruction could affect interstate/ foreign commerce; (4) all impoundments of waters otherwise defined as waters of the U. S., (5) tributaries of waters identified in 1 through 4 above; (6) the territorial seas; and (7) wetlands adjacent to waters identified in 1 through 6 above. Only the USACE has the authority to make a final wetlands jurisdictional determination.</p>
